Status of the Claims

Claims 1-23, 26-27 and 29 have been presented for examination.

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-15, drawn to a method for purifying fibrinogen with HIC, classified in class 530, subclass 415.
- II. Claims 16-19, drawn to purified fibrinogen, classified in class 530, subclass 382.
- III. Claims 20-21, 23 and 29, drawn to a fibrin sealant and method of making, classified in class 435, subclass 68.1.
- IV. Claim 22, drawn to a fibrin sealant kit, classified in class 435, subclass 214.
- V. Claims 26-27, drawn to a surgical method using a fibrin glue, classified in class 604, subclass 289.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the product is known from natural sources and can be prepared by different methods such as cryoprecipitation and further purification. Production in other hosts and purification therefrom is known.

Inventions II, III, IV and V are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions The three products are materially distinct from each other. Group II is purified fibrinogen, Group III is the product of the reaction of fibrinogen and thrombin protease, while Group IV is a combination of separate active ingredients in a convenient kit form, thrombin and fibrinogen is separate containers. These products are clearly different each from the other. The surgical method of Group V could use fibrinogen glue from alternative commercially available sources.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
